

Vera, the essence of Project Control

Project Control is nearly universally accepted as the lynchpin of successful delivery, and yet it's meaning is poorly understood and true control is rarely achieved. Design and construction projects and programs, large and small, are plagued by cost overruns, delays, and poor quality. Control is about providing current, accurate and complete visibility across key data regarding not only time, cost and quality, but as importantly safety, quality and risk. Control is about not only understanding history in the rear-view mirror, but more importantly a clear view of trends, obstacles, options and recommendations through a future-looking windshield that enables intelligent decision-making. Often, powerful and technically complex systems are deployed but not utilized to meaningful effect, instead yielding pro forma reports that 'tick the box' of a required monthly deliverable rather than a useful management tool. Many man-hours are devoted to producing thick documents that nobody reads.

KaiZult has teamed up with Andy Snodgrass, founder of SW4Cx to create **Vera**, a system elegant in its simplicity, easy to use, easy understand, and easy to customize to meet your needs. Equally important, Vera can be mobilized rapidly for immediate impact on even the largest, most complex and iconic projects and programs. A complete database of cost and schedule information, including original baselines and historical and current actual progress provides Vera's underlying strength and integrity. Actionable information is communicated in customized reports and executive dashboards providing managers and clients with appropriate levels of detail from an accurate, current, complete and rigorously managed '**single source of truth**'. Vera provides a clear picture of the program level 'at a glance', more detailed project-level dashboards, and more detail still by drilling down into the cost and schedule data. The health of any capital program as well as its component projects can be rapidly assessed. Vera tells you what you need to know, when you need to know it, enabling effective and timely decision making.

CONTROL:

- **Accurate, Complete, Timely Information**
 - **Budget**
 - **Schedule**
 - **Quality**
 - **Safety**
 - **Risk**
- **Program & Project Level Executive Dashboards**
- **Detailed Reports**
- **Recommended Action**

**Lead the Strategy, manage the risks, assure the outcomes...
...with Vera, your single source of truth**
